VSA's visit the two pump houses once a day for a week to monitor the water system operation. This includes measuring the chlorine levels, recording the gallons pumped and other data, and looking for problems like a leak or no heat. It takes 10-15 minutes. This is an invaluable service to the community since it helps insure the delivery of high quality water and eliminates the cost of a third party performing this service. In addition, you get to join your fellow VSAs at the incredible, free, annual thank-you dinner. If you have any interest please contact Ken Heiden (973-425-0875).
